

Head of Infra

Description de l'offre d'emploi

We deployed 7 shopping malls in the last two years, we will deploy 25 shopping malls across all Europe in the next 2 years with the world wide leader. We need to robustify and scale our infrastructure to handle the growth.

We have three infrastructures :

- the machines installed in the shopping responsible for processing in real time the video streams using AI (CentOS, C++)
- the cloud machines responsible for collecting the data (OVH, CentOS, Saltstack - Python, Flask, PostgreSQL for backend - React.js for frontend dashboards)
- the internal cloud for preproduction machines (OpenStack, Synology, CentOS)

We are still building the infrastructure and securizing it - LDAP to access the machines, GLPI for ticketing, ... There are three collaborators - support, application calibration, sysops and we are currently hiring a DevOps.

Pré-requis du poste

You should have a strong interest in infrastructure automatization and scaling.

Your responsibilities:

- Maintain our infrastructure using Saltstack
- Automate CI/CD pipelines for C++ and web codebases

Your stack & qualification :

- Gitlab CI or equivalent (Jenkins, ...)
- Saltstack or equivalent (Ansible, ...)
- Infrastructure tools (VPN, LDAP, GLPI, ...)

Process:

- 1) phone interview
- 2) technical test
- 3) interview in our offices / visio
